

Minutes- Group Project

SEM5640

October 14, 2015

1 Minutes - 14/10/15

Attendees: CH, HH, DM, SJ, CG

1.1 Decisions from research

- To use Conqat for QA
- StyleCop- for code style checks for .NET side
- For code style in Netbeans, use one of the main plugins

1.2 Scrum

- In agreement to have one person as backlog manager
- Scrum master role- Craig
- Product owner- Connor to keep a check up on the backlog, to ensure work is not behind.

1.3 Repository

- To set up an in-line repo on github to push to for code access for the product owner and manager.

1.4 Clarifications from design meeting

- FR2 - Can activities/ categories be made dynamically?
- FR4 - How often should the system call an update for receiving data from FitBit etc?
 - If the system is primarily a competition system, should we restrict the user from manually updating to make the challenges fair?
- FR5 - Should our end-point API allow GET and POST to our system?

- FR8 - What needs to be recorded when data is deleted? Note and timestamp/ History should be able to be rolled back?
- FR9 - Clarify privacy policy, should individuals see only their group members' data? Can members change their data privacy levels?
- FR11 - What sign up types can we use? Can we force Facebook and Google sign ups on users? Or only University authorisations?

1.5 Action points:

- All members to research into internationalisation for both languages.
- Find out if we can have styleCop installed on university machines.
- Organise meeting with Neil/ product owner
- Set up GitRepo dual origin
